

Granular

Single Action Pea and Lentil Granular Inoculant

BYSI-N Granular for pea and lentil is a high quality, single action inoculant that uses a high-performing strain of *Rhizobium leguminosarum*. It is a well proven, peat-based granular with good metering performance for pea and lentil growers.

Granular Formulation Advantages

- BYSI-N Granular provides the ideal environment for maximum survival of the nitrogen fixing bacteria in the root zone. The peat granule and its ability to provide moisture, nutrients and temperature stability ensures maximum rhizobia survival before and during nodulation of the developing roots of the pea or lentil crop.
- BYSI-N Granular is a seed row placed product that eliminates potential damage to rhizobia from seed placed treatments. Compatibility issues are no longer a concern.
- BYSI-N Granular provides consistent performance in a wide range of planting conditions. It provides the extra protection needed for successful performance in cold, dry and wet conditions.

In-Furrow Inoculant for Peak Performance

FEATURES

Active Ingredients:

- 1×10^8 viable *Rhizobium leguminosarum* per gram

Recommended Application Rate:

- 6.5 lbs/ac (7 in row width)
- 5 lbs/ac (9 in row width)
- 3.8 lbs/ac (12 in row width)

Package Sizes:

- 40 lbs/bag (50 bags per pallet)
- 520 lbs/tote (3 totes per pallet)

Bulk Density:

- 43 lbs/ft³

Always read and follow label instructions

About Lallemand Plant Care

Lallemand Plant Care (LPC) specializes in employing microorganisms including, but not limited to, yeast, bacteria, fungi and plant derivatives for biocontrol (i.e., controlling of harmful insects or microorganisms), biostimulation (i.e., eliciting natural responses) and biofertilization (i.e., enhancing plant nutrition).

Using a "field-led, science-supported" approach, LPC works closely with clients to deliver the right products for the right applications that benefit crops and create better customer experiences.
